PROFESSIONAL SUMMARY

AI Officer at Teleperformance Malaysia, progressing from intern to full-time while delivering production automation and AI solutions across seven countries with $500K+ in measured ROI. Experienced in building OCR and local-LLM pipelines, Microsoft Copilot Studio agents, and enterprise workflow automation, with end-to-end ownership spanning deployment, multi-country rollouts, user training, and ongoing maintenance. Software Engineering graduate with a 3.88/4.00 GPA and full-stack and mobile development experience using Next.js, Python/FastAPI, Flutter, and Supabase.

EXPERIENCE

Teleperformance Malaysia | Kuala Lumpur, Malaysia — 2025 – Present

AI Officer (full-time) — 2026 – Present

Automation Developer (full-year internship) — 2025 – 2026

- Delivered enterprise automation and AI solutions across HR, Finance, Global Talent Mobility, Recruiting and client operations, generating $500K+ in measured ROI through hours saved and headcount avoided.
- **Hiring Request Management System:** Built and have maintained for over a year the company's first centralized hiring workflow (Power Apps, Power Automate, SharePoint) with AI screening. Launched in Malaysia and Thailand, then adopted in China, Korea, Japan, Indonesia and Vietnam; now used by 200+ people up to regional CEO level. Delivered requirements, design, rollout and country-by-country training, and kept the tool aligned with changing requirements.
- **Intelligent Document Extraction:** Designed an email-triggered pipeline: forwarded emails start Power Automate and Power Automate Desktop flows, documents run through PaddleOCR, a locally hosted LLM (Ollama) maps the required fields, and a Python FastAPI service populates the client's dashboard automatically.
- **AI agents (Microsoft Copilot Studio):** Built a client site-assessment agent that calculates ROI, proposes solutions from the company's tool knowledge base and generates the proposal slide deck, and a recruiting agent that analyzes applicant profiles to produce tailored interview questions and discussion topics. Earlier department agents reduced repetitive queries to HR and Operations.
- **Finance Reimbursement Automation:** Built a Next.js intake form feeding manager approval, multi-level Power Apps review and finance-system submission, removing manual spreadsheet handling; added OCR to extract expense details from submitted receipts automatically.
- **Promotion Management System:** Automated the company-wide promotion workflow on the Power Platform: multi-level approval routing, automated reminders and auto-generated promotion letters on final approval.
- **Client Event Management System:** Built a Power Platform application for a client that uses AI to analyze event performance and auto-generate reports.

EDUCATION

Universiti Teknologi Malaysia (UTM) | Bachelor of Software Engineering, Johor, Malaysia — 2022 – 2026

GPA 3.88 / 4.00.

Coursework: Data Structures & Algorithms, Database Systems, Software Engineering, Software Design & Architecture, Operating Systems, Artificial Intelligence, Computational Intelligence.

PROJECTS

Yalla-Fitness | Full-stack fitness platform (final-year project) 2026

Flutter, BLoC, Clean Architecture, Supabase, Next.js, TypeScript, Tailwind CSS

- Built a cross-platform fitness app in Flutter (BLoC, Clean Architecture) on Supabase (Auth, Postgres, Storage, Edge Functions) with onboarding, calorie and body-metric calculations, workout scheduling, barcode-scan nutrition tracking, goal tracking, and Google Fit/Health Connect and Spotify integrations.
- Developed an LLM-powered AI fitness coach through Supabase Edge Functions to keep API keys secure and manage server-side conversation memory.
- Created a Next.js admin dashboard with role-based access and a CMS for workouts, exercises, supplements and educational content, with live mobile preview.
- Secured the backend with row-level security policies, triggers and audit logging to protect data integrity.

EduSync | Next.js, Express.js, MongoDB, Tailwind CSS 2024

- Full-stack platform for sharing course materials and Google Drive links and managing academic tasks, with role-based access for admins, lecturers and students.

Cook&Go | Next.js, Firebase, Tailwind CSS, Vercel 2025

- Food-ordering platform with a customer menu and order flow plus an admin dashboard for analytics, users and orders; deployed on Vercel.

TECHNICAL SKILLS

AI & Automation: Microsoft Power Platform (Power Apps, Power Automate, Power Automate Desktop, Copilot Studio), PaddleOCR, Ollama, LLM integration, AI agent design

Programming: Python (FastAPI), JavaScript, TypeScript, Dart, SQL, Java, C++, PHP, HTML, CSS

Full-Stack & Mobile: Next.js, React, Express.js, Flutter (BLoC, Clean Architecture), Tailwind CSS

Data & Backend: Supabase (Postgres, Edge Functions, RLS, Storage), SharePoint, MongoDB, Firebase, REST APIs

Practices & Tools: Git, CI/CD, Vercel, Figma, audit logging, row-level security, requirements gathering, user training

LEADERSHIP & LANGUAGES

- **Yemeni Student Academic Group (YSAG):** Head of Computing, 2023 – 2024
- **Arabic Culture Day (ACD):** Country Representative & Director of Performance, 2024
- **Languages:** English (professional proficiency), Arabic (native)
